CAS NO	1078-21-3
	C10H14CINO2
Molecular weight	215.68
Assay	99%
Appearan ce	White Powder
Usage	New antiepileptic drugs. Used in the treatment of peripheral neuropathy, or partial seizures adjuvant treatment.
Standard	Enterprise standard
MP	194-201°C
Minimum order quantity	10g

Phenibut is a Russian Nootropic that is most commonly used for boosting mood, treating anxiety and helping to promote healthy sleep. Phenibut has a pretty complicated way that it interacts with the body, but interestingly, it is almost exactly the same way that alcohol works.

Phenibut is a calming, mood lifting, sociability enhancing, and potentially (in low serving sizes) nootropic supplement that acts as a GABA-B agonist to ease stress and support a positive, social mood. The primary benefits of Phenibut use also include pain-reduction, easing muscle tension and stress, and promotion of deep, restful sleep. Phenibut is one of the most effective and powerful amino acid supplements available.
