Levamisole is also a good alternative in cases of benzimidazole resistance. Levamisole Hydrochloride (Levamisole HCl), is an anthelmintic (animals roundworm, hookworm, etc.) agent commonly used in large livestock such as cattle, pigs and sheep. It can selectively inhibit succinate dehydrogenase in parasite's muscle so as to stop the reduction of succinic acid from fumaric acid. Therefore the parasite's muscle metabolism lacks of oxygen and leads to decreasing of energy.

**Function:**

- 1) Levamisole has been used to treat a variety of dermatologic conditions, including skin infections, leprosy, warts, lichen planus, and aphthous ulcers.
- 2) Levamisole can improve the patient's ability to fight bacteria and virus infection.
- 3) Laboratory use, It is used to immobilize the nematode.
