Description

Hexapeptide-10 is a synthetic peptide containing Alanine, Isoleucine, Lysine, Serine and Valine residues. It increases the synthesis of laminin V and $\alpha 6$ -integrin to promote cell binding, with extraordinary visible skin restructuring and firming abilities.

Hexapeptide-10 promotes the rebuilding of collagens and helps reduce fine lines and pore size. It is a firming active that strengthens the dermo-epidermal junction.

Application&Function

- 1.Hexapeptide-10 is from an adhesion sequence of laminin, which restores the cutaneous structure.
- 2.Hexapeptide-10 is a firming active that promotes a double-cellular activity on both keratinocytes and fibroblast.
- 3.It increases the synthesis of laminin-5, alpha6-integrin and hemidesmosomes, thus strengthening the dermal-epidermal junction. With Hexapeptide-10,the skin is restructured, replenished, firmer and more elastic, recovering its fullness.
