Description

Palmitoyl pentapeptide-4 (Pal-Lys-Thr-Thr-Lys-Ser = Pal-KTTKS) contains 5 amino acids linked to a 16-carbon

aliphatic chain for improving the penetration of the molecule through the lipid structures of the skin. It is a matricide.

Matrikines are messenger peptides capable of regulating cell activities by interacting with their specific receptors.

They activate certain genes involved in the process of extracellular matrix renewal and cell proliferation. By activating

the neosynthesis of extracellular matrix macromolecules, palmitoyl pentapeptide-4 provides an anti-wrinkle effect.

[medical citation needed] Studies (in vitro and in vivo) demonstrating the anti-wrinkle efficacy of this peptide have

been conducted and published by Sederma and by independent organisations.

Application&Function

1. Palmitoyl Pentapeptide-4 reduces existing facial wrinkles.
2. Palmitoyl Pentapeptide-4 is effective against the development of new wrinkles.
3. Palmitoyl Pentapeptide-4 decreases the depth of facial wrinkles caused by the contraction of muscles from facial expressions, especially near the eyes and on the forehead.
