**Description**

L-carnosine is a small molecule dipeptide composed of two amino acids  $\beta$ -alanine and L-histidine. It is widely found in skeletal muscle, heart, brain and other nerve tissues in the body. A natural antioxidant. Potential antioxidant and anti-glycosylation activity.

**Application&Function**

1. It can prevent skin aging and skin whitening.
2. It can prevent free radicals generated by smoking, and this free radical can damage the skin more than sunlight. Free radicals are very active in the human body. The atom or group of atoms can oxidize other substances in the human body.
3. It can inhibit a series of peroxidation reactions in the cell, that is, carnosine can inhibit every step of the oxidation reaction in the entire peroxidation chain in the organism;
4. Take zinc-carnosine together with food can effectively prevent ulcers.
5. Carnosine has immune regulation function, and is the only physiologically active substance used for immune regulation discovered so far. It has been widely used in the treatment of various immune diseases and diseases caused by abnormal immunity, such as serum diseases, lupus erythematosus, etc. Rheumatoid and so on. In addition, carnosine has certain therapeutic effects on wound healing, early senile cataract, immature cataract, cervical erosion, liver disorders, myocardial insufficiency and other diseases.
